

SUMIT KUMAR

Software Engineer-II | Java | Spring Boot | Microservices | Kafka | AWS | Kubernetes | Distributed Systems | GenAI / RAG

Bengaluru, India | sumitranjanmishra@gmail.com | +91-9304100429 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

- Software Development Engineer with 5 years of experience designing and building scalable distributed systems, cloud-native microservices, and event-driven platforms using Java, Spring Boot, Kafka, Redis, PostgreSQL, AWS, Docker, and Kubernetes.
- Proven track record of delivering high-impact enterprise solutions across Telecom, Banking, Compliance, and Analytics domains, including reducing data onboarding effort by 40%, improving platform reliability by 25%, and supporting products used by 100K+ users.
- Strong expertise in microservices architecture, system design, asynchronous processing, REST APIs, distributed caching, fault-tolerant systems, and production support. Hands-on experience building AI-powered applications using OpenAI, Llama 3.3, Lang Chain, Vector Databases, and Retrieval-Augmented Generation (RAG).
- Passionate about building highly available, scalable, and secure backend systems while driving end-to-end ownership from design to deployment and production operations.

CORE TECHNICAL SKILLS

Programming Languages: Java 8/11/17/21, JavaScript, TypeScript, SQL

Backend & APIs: Spring Boot, Spring Security, Hibernate, JPA, REST APIs, Microservices, Swagger/OpenAPI

Distributed Systems: Apache Kafka, Redis, Event-Driven Architecture, Multithreading, Asynchronous Processing

Cloud & DevOps: AWS (EC2, S3, RDS, SQS, SNS), Docker, Kubernetes, Jenkins, GitLab CI/CD

Databases & Tools: MySQL, PostgreSQL, Neo4j, Redis, Git, Linux, JIRA, Maven

Testing & Quality: JUnit, Mockito, Integration Testing, JMeter, Test-Driven Development (TDD)

Architecture & Design: System Design, Distributed Systems, Design Patterns, SOLID Principles, JWT Auth, RBAC, API Gateway, Load Balancing, Service Discovery, Distributed Caching, Circuit Breaker Pattern, Resilience4j

Monitoring & Observability: Grafana, Prometheus, ELK Stack, Splunk, CloudWatch

AI / GenAI: OpenAI API, Claude (Sonnet, Haiku, Opus), Llama 3 / 3.3, LangChain, Vector Databases, Embeddings, RAG, Prompt Engineering, AI Application Development

PROFESSIONAL EXPERIENCE

Software Engineer (Professional) | British Telecom (BT Group) Jan 2025 – Present

- Architected and owned 5+ Spring Boot microservices spanning Telecom Governance, Network Management Systems (NMS), Compliance Management Systems (CMS), and enterprise analytics, supporting 10,000+ operational metrics and 5,000+ compliance controls.
- Launched a centralized Control Tower platform adopted by 400+ enterprise users, cutting time-to-detect compliance and operational issues and giving leadership real-time visibility into network assets.
- Engineered an AWS-powered Data Landscaping platform (S3, RDS, SQS) that cut enterprise data onboarding effort by 40%.
- Re-architected event processing on Kafka with retry logic and dead-letter queue handling, lifting platform reliability by 25% and cutting unplanned downtime.
- Shipped AI-powered analytics using OpenAI APIs and Llama 3.3 that generate natural-language-driven, auto-adapting dashboards, cutting manual report-building time for analysts.
- Stood up a Retrieval-Augmented Generation (RAG) pipeline with vector embeddings and semantic search, speeding up enterprise knowledge discovery for internal teams.
- Drove root cause analysis (RCA) on production incidents, closing out recurring issues, and reducing repeat-incident rates.

Technology Stack: Java 17, Spring Boot, Kafka, JUnit, Mockito, Neo4j, PostgreSQL, AWS, Docker, Kubernetes, OpenAI API, Llama 3.3, LangChain

Software Engineer | iFocus Systec India Pvt Ltd May 2024 – Jan 2025

- Scaled an enterprise feedback and analytics platform to 100,000+ active users, building responsive React dashboards for real-time business insights.
- Rolled out Role-Based Access Control (RBAC) across the platform, securing access for 400+ stakeholder roles without slowing existing workflows.
- Designed an AI platform converting user stories and requirements into manual test cases and automated Selenium/API scripts, using OpenAI APIs and Llama 3 to generate test scenarios and edge cases.
- Tuned prompt engineering and validation workflows, lifting generated-test accuracy and coverage and cutting manual QA effort by an estimated 40%.
- Partnered with architecture and product teams on production deployments for the platform's analytics and reporting modules.

Technology Stack: Java, Spring Boot, React, AWS, OpenAI API, Llama 3, LangChain, Vector Database

Software Engineer | *Sequro Technologies Pvt Ltd* Dec 2021 – May 2024

- Replaced Falcon FRM with a mission-critical fraud-risk management platform, building Kafka-based event-driven microservices that processed 100K+ transactions for banking fraud detection.
- Built secure Spring Boot services for high-volume transaction processing, supporting performance tuning that cut average response time by 25%.
- Shipped a compliance management platform with a Dynamic Query Builder, enabling analysts to run advanced transaction analysis without engineering support.
- Cut query latency through indexing and query optimization strategies, partnering with product, QA, and business teams to deliver releases on schedule.

Technology Stack: Java, Spring Boot, PostgreSQL, Kafka, Redis, AWS

KEY ACHIEVEMENTS

- Reduced data onboarding effort by 40% through an AWS automation platform.
- Reduced operational downtime by 25% through resilient Kafka-based processing.
- Increased automated test coverage to 85% through TDD adoption.
- Built a Generative AI Test Automation platform using OpenAI APIs and Llama 3.
- Successfully delivered banking, compliance, fraud-risk, and analytics platforms used by enterprise stakeholders.

AWARDS

- Commitment to Excellence Award

EDUCATION

Bachelor of Technology, Computer Science & Engineering

Aryabhatta Knowledge University, Patna, Bihar — 2021
